Introduced by Assembly Member Dutra

February 19, 2003

An act to add 99180 to the Public Utilities Code, relating to transportation.

LEGISLATIVE COUNSEL'S DIGEST

AB 684, as introduced, Dutra. Public transit smart cards.

Existing law requires transit operators to honor any current identification card that is valid for the type of transportation service or discount requested and that has been issued to an individual with disabilities by another transit operator.

This bill would require all publicly owned transit operators who choose to implement a smart card system, as defined, to comply with specified requirements. The bill would require the Department of Transportation and the transit agencies who choose to implement the smart card system to establish a committee of smart card systems managers. The bill would require the department to submit a report to the Legislature not later than January 1, 2006, and annually thereafter, describing the progress toward implementing a statewide interoperable smart card system.

Vote: majority. Appropriation: no. Fiscal committee: yes. State-mandated local program: no.

The people of the State of California do enact as follows:

1 SECTION 1. The Legislature finds and declares as follows:

(a) Smart card electronic payment media systems, both contact and contactless, excluding magstripe or paper fare medium, can enhance transit passenger mobility, expedite transit boardings, reduce fare collection costs, and provide valuable planning information.

- (b) Smart cards used on public transit are likely to have widespread applications outside of transit use.
 - (c) More than one system and technology is available.
- (d) There are multiple agencies in the state operating a variety 10 of transit modes, who are potential users of smart card systems.
 - (e) There are currently no smart card electronic payments media systems operating on transit systems in the state, although several operators have selected a system or technology for future implementation.
 - (f) It is in the best interest of transit passengers and transit operating agencies, as well as other potential users of systems, to have smart card electronic payment media and technology that can read and write data from all smart card systems in the state.
 - (g) Compatible smart card electronic payment media systems can be selected for statewide use without requiring the purchase and installation from a single vendor or producer.
 - (h) The use of smart cards can greatly increase the level of convenience and facilitate transfers for transit riders, and increase efficiency and reduce costs for transit providers, potentially leading to increased transit ridership and reduced automobile dependency.
 - SEC. 2. Section 99180 is added to the Public Utilities Code, to read:
 - 99180. (a) For those publicly owned transit operators who choose to implement a smart card system, all smart cards, contact or contactless, excluding magstripe or paper fare medium, used as electronic fare media shall comply with the following requirements:
 - (1) All smart card systems placed under contract for installation after December 31, 2004, shall contain a slot reserved for a public domain Security Access Module (SAM) regardless of the vendor, manufacturer, or issuing public transit system operator.
 - (2) All smart card systems in operation or under contract for installation prior to December 31, 2004, shall procure equipment

-3- AB 684

with a slot reserved for the public security access module (SAM) pursuant to paragraph (1) as related components of their existing system are replaced or upgraded.

- (3) All transit agencies that purchase technology to accept smart card fare payments are encouraged, but not required, to also accept smart card electronic purse (e-purse) transactions from other transit operators within the state. Acceptance of e-purse transactions from another system shall be dependent on the application issuer and transaction acquirer agreeing on the following:
- (A) The application being accepted for payment can comply with the acceptors standards for security, audit, business rules execution, and settlement processing.
- (B) The acceptor's systems can interact with the card application consistent with the application issuer's standards for security, audit, business rules execution, and settlement processing.
- (C) A certification process that demonstrates that both the acceptor's and issuer's standards are being met.
 - (D) The financial terms of the agreement.
- (4) A public domain e-purse application and an associated public domain security access module (SAM) shall be developed for the purpose of facilitating interoperability between systems that do not have compatible technology that meet the requirements of paragraph (3).
- (b) The Department of Transportation acting as the lead agency, shall establish a committee of smart card system managers, consisting of representatives from Metropolitan Transit Commission, Ventura County Transportation Commission, Los Angeles County Metropolitan Transit Authority, Orange County Transit Authority, and Metropolitan Transit Development Board, to oversee the development of specifications and software to implement the public domain e-purse application and associated public domain SAM. The committee shall develop the standards to which the public domain e-purse application and associated public domain SAM shall be developed by June 2005.
- (c) Upon completion of the standards, the department shall solicit proposals from smart card vendors for the development of the public domain e-purse application and associated public domain SAM. This public domain e-purse application and

1 associated public domain SAM shall then be available to all vendors and agencies that wish to develop interoperable smart card 3 systems.

- (d) For purposes of this section, "smart card system" is a system that utilizes a computer chip and is capable of exchanging information with a device that monitors fare.
- 7 (e) The department shall submit a report to the Legislature not 8 later than January 1, 2006, and annually thereafter, describing the 9 progress made towards the implementation of statewide 10 interoperable smart card systems.
